APB FEATURES

BUILT-IN ACCUPACK:

AudioPressBox includes a built-in rechargeable Li-Ion AccuPack for independent operation without power supply (8 - 10 hours operation). Professional and user friendly solution without memory effect.

TEST OSCILLATOR:

The test oscillator simulates the peak audio levels of the AudioPressBox. It is used before the actual start of the conference, so the people from the media could easily set up the nominal audio levels in their devices connected to the AudioPressBox. This ensures that the media get only the best signal possible during the whole conference.

REDUNDANT POWER SUPPLY:

Each power supply is capable of powering the entire AudioPressBox and only one runs at a time. If one fails the other power supply keeps the AudioPressBox powered up. The switch between the power supplies is seamless, so as not to interrupt the normal use of the AudioPressBox. The redundant power supply is necessary for highly important situations (Elections, Government speech, etc) to minimize the chance of failure. The key features of RPS are reliability and safety.
